

Concrete Preparation

Moisture Mitigation:

One of the most common issues in concrete preparation and one of the most expensive is excessive moisture in a concrete slab. Our certified personnel assess and recommend suitable moisture control systems based on the specific site and flooring requirement. Industry leading materials and warranties back our proven track record of providing solutions for dealing with high moisture levels.

Coating & Adhesive Removal:

Removing previous floor coatings and coverings can be a time consuming and difficult task requiring professional equipment and experienced people. Before installing a new floor or resurfacing an existing floor, you may need to remove carpet glue, tile mastic, tile mortar, paint, epoxy coatings or other coverings. LSI is equipped and experienced in removing almost any surface while meeting your timelines and budget.

Crack Chasing & Joint Filling:

It's vital that cracks in any concrete surface be properly chased and filled, improper repair can lead to future problems with any floor slabs. Our fast and affordable repair service provides a permanent solution to your concrete cracking problems. Additionally our experience with joint filling with epoxy and polyuria joint filling materials make sure floor joints are properly prepped and filled with materials appropriate to your business need.
