

## Garage Traffic Topping

Hi-rises, residential, commercial or public parking garages are prime locations for concrete deterioration and traffic membrane failure. The Liquid Stone team has over a decade preparing, repairing or restoring parking garage and concrete projects across Canada.

Cracking, leaching, concrete spalling/scaling, joint deterioration, and reinforcement corrosion are all associated with the deterioration of underground concrete parking garage structures.

If left unmitigated, deterioration will continue, often at an exponential rate resulting in reduced structural integrity, unsafe traffic conditions and potential personal injury hazard. Whether it be traffic coating failure, deterioration to slabs, stairs or columns, Liquid Stone uses industry leading materials to complete your restoration project on time and on budget.

### Solutions include:

- Concrete Removal & Replacement
- Waterproofing
- Grouting
- Concrete Injection
- Crack Injection
- Floor Overlays
- Concrete Resurfacing
- Concrete Protection
- Sealers
- Protective Coating
- Epoxy Repair
- Protective Lining
- Joint Sealing
- Traffic Deck Coatings
- Sand & Media Broadcast
- Shot Blasting
- Garage Floor Markings and Coatings
