

Polished Concrete

The Liquid Stone team have been innovators in polishing commercial and residential concrete flooring. We provide professional results guaranteed to meet the highest standards. Our experience and equipment will reveal the hidden beauty of your concrete floor. We take the necessary steps to ensure a flawless, long-lasting finish.

Design Benefits:

Concrete polishing can transform drab concrete floors into an amazing design feature that rivals the look of other finishing choices, such as tiles, marble, hardwood or carpet. Polished concrete floors are also very versatile. The degree of shine and even the size of aggregate exposed can create a variety of different looks for a wide range of needs, including:

- Residential homes
- Commercial office buildings
- Retail showrooms and storefronts
- Commercial kitchens and restaurants
- Hospitals and educational facilities
- Warehouses

Low Maintenance:

Concrete polishing creates a durable long-lasting finish, so you'll save in the long-term on maintenance costs. Unlike carpet, which needs to be cleaned every six months, or hardwood, which is expensive to refinish, concrete floors can be affordably re-polished every 3-5 years. Polished concrete floors make the economical sense for schools, sports facilities, hospitals, stores and warehouses with heavy foot traffic.
